tsaADVET advanced enterprise technologies

tsaADVET has been providing document management solutions since 1989. The companies' flagship product is Falcon/DMS®, our own EDMS product. Developed by tsaADVET, Falcon/DMS today provides enterprise-wide control over both documents and plotting for some of the world's largest engineering organizations. More precisely, Falcon/DMS is now capable of managing documents over the internet as well as within the client-server architecture.

Falcon/DMS is the core product of *tsaADVET's* document management offerings. Falcon/DMS offers a comprehensive and flexible solution to most document management challenges while remaining easy to implement, configure, and use. Falcon/DMS technology offers a complete solution for any WAN/LAN or web-based office automation effort. Whether the focus is on general document or CAD document control, high volume reprographics, scanning, or document vaults, Falcon/DMS provides a robust solution.

The **Falcon/WebSuite** is a set of three Microsoft IIS-based extensions for the Falcon/DMS Engineering Document Management System that, depending on the extension installed, provides view or modify access to documents through a Web browser over intranets, extranets, and the Internet, and allows you to perform tasks that otherwise fall on the webmaster, network administrator, and programming staff.The Falcon/WebSuite comprised of **Falcon/SVP**, **Falcon/Post** and **Falcon/Enterprise,** can be configured to use either java applets or plug-in technology to enable the browser-based viewing and/or checkout of selected documents and has been certified for a number of web publishing engines.

Falcon/Deliver! is a document 'packaging' application that overlays standard Falcon/DMS and is used to define document sets, capture database information for those documents, and create customized searching and viewing interfaces. The complete 'package' is then transferred to a CD or DVD for distribution or archiving.The resultant dataset includes a license-free copy of Falcon/DMS for offline document searches

Falcon/Indexer streamlines the process of creating database records for electronic documents with easy-to-use indexing and management tools. Designed to facilitate 'heads up' indexing, the Falcon/Indexer interface integrates an image viewing area with data entry tabs, thereby enabling a user to examine images as closely as required while entering metadata from the same application window.
